ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to all those who supported me in successfully completing my Community Service Project titled *"Awareness of Education"*.

First, I am deeply thankful to our institution and management for providing me with this valuable opportunity to carry out this project, which helped me understand the importance of education in society.

I extend my heartfelt thanks to my project guide/faculty supervisor for their constant guidance, valuable suggestions, and encouragement throughout the project period. Their support played a key role in completing this work effectively.

I also thank all the participants and people in the community who cooperated with me during the awareness program and shared their valuable time and thoughts.

Finally, I would like to thank my family and friends for their continuous encouragement, motivation, and support during the completion of this project.

This project has been a meaningful learning experience for me, helping me gain knowledge about the importance of education and its impact on society.

INTRODUCTION

Education is the foundation of a strong and developed society. It plays a very important role in shaping an individual's personality, improving knowledge, and developing skills required for personal and professional life. The main purpose of education is not only to gain academic knowledge but also to build values such as discipline, responsibility, equality, and respect for others. An educated society leads to better opportunities, improved living standards, and overall national development.

The Community Service Project titled *"Awareness of Education"* is carried out with the aim of creating awareness among people about the importance and benefits of education. In many rural and underdeveloped areas, people are still not fully aware of how education can change their lives. Due to lack of awareness, issues such as school dropouts, child labour, early marriages, and unemployment are still seen in society. This project focuses on addressing these problems by spreading awareness and encouraging people to prioritize education.

The project mainly involves interacting with students, parents, and local communities to explain the importance of education in daily life. It highlights how education helps individuals to get better job opportunities, improve financial status, and lead a dignified life. It also focuses on government schemes and initiatives that support free and quality education for children.

Through awareness programs, posters, discussions, and field visits, efforts are made to motivate parents to send their children to school regularly and continue their education without interruption. Special emphasis is given to the importance of girl child education, as educating girls leads to the development of the entire family and society.

This project also helps in understanding real-life challenges faced by students, such as lack of infrastructure, financial problems, and lack of motivation. By identifying these issues, solutions and suggestions are provided to improve the educational environment.

Overall, the *"Awareness of Education"* project is an initiative to inspire people to understand that education is not a luxury but a basic necessity. It is the key to breaking the cycle of poverty and building a better future for individuals and society as a whole.

Another important aspect of this project is that it helps in changing the mindset of people who still consider education as less important compared to earning money at an early age. Through continuous awareness efforts, people are encouraged to understand that short-term earnings may help temporarily, but education provides long-term stability and success. The project also emphasizes the role of teachers, parents, and society in supporting children to complete their education without interruption. By creating a positive environment and motivating students regularly, we can ensure that every child gets equal opportunities to learn and grow.

About the Village / Habitation

Kommarigiripatnam is a small rural habitation where most of the people depend on agriculture, daily wage work, and small-scale activities for their livelihood. The village has a simple lifestyle with close-knit families and a peaceful environment. The community mainly consists of farmers, labourers, and local workers who contribute to the development of the area in their own ways.

The village has basic facilities such as a primary school, roads, and drinking water sources, but still requires improvement in areas like higher education facilities, healthcare services, and employment opportunities. Many children in the village attend school, but some students face challenges such as financial difficulties, lack of awareness about higher education, and distance to nearby colleges.

During the Community Service Project on *"Awareness of Education"*, Kommarigiripatnam was selected as the field area to understand the educational status of the people and to spread awareness about the importance of education. Interactions with villagers showed that while parents are supportive, they often need more guidance regarding the benefits of continued education for their children.

The project helped in identifying that education awareness is improving slowly, but still needs strong encouragement, especially for girl child education and higher studies. Efforts were made to explain how education can help in improving job opportunities, financial stability, and overall quality of life.

Overall, Kommarigiripatnam represents a typical rural habitation where education awareness plays a key role in shaping the future of the younger generation.

Socio-Economic Survey of the Village/Habitation.

The socio-economic survey of Kommarigiripatnam habitation was conducted as part of the Community Service Project *"Awareness of Education"* to understand the living conditions, occupation, income levels, education status, and basic facilities available in the village. The survey helped in identifying the social and economic background of the people and the challenges they face in their daily life.

Most of the families in Kommarigiripatnam belong to the lower and middle-income groups. The primary occupation of the villagers is agriculture, followed by daily wage labour, small business activities, and livestock rearing. A few people are also engaged in services and self-employment activities. The income of most households is limited and depends mainly on seasonal work, which creates financial instability at times.

In terms of education, many children are attending government schools in the village and nearby areas. However, the number of students pursuing higher education is comparatively low due to financial problems, lack of awareness, and distance to colleges. Dropout cases are observed mainly after secondary education. The survey also showed that awareness about government educational schemes is limited among some families.

The housing conditions in the village vary from semi-pucca to pucca houses. Basic facilities such as electricity, drinking water, and road connectivity are available, but some areas still require improvement. Sanitation facilities have improved over the years, but awareness regarding hygiene practices needs to be strengthened further.

Healthcare facilities are available at nearby primary health centers, but villagers often depend on nearby towns for advanced medical treatment. Transportation facilities are moderate, with buses and private vehicles being the main mode of travel.

Overall, the socio-economic survey of Kommarigiripatnam shows that while the village has basic infrastructure and a hardworking community, there is still a need for improvement in education awareness, income generation opportunities, healthcare access, and skill development programs. Strengthening these areas will help in improving the overall standard of living of the villagers.

QUESTIONS ASKED IN SURVEY

1. **What is the total number of family members in your household?**
2. **What is your main occupation?**
3. **What is your monthly/annual income range?**
4. **Are all children in your family attending school? If not, why?**
5. **What is the highest educational qualification in your family?**
6. **Are you aware of government education schemes (scholarships, free education, mid-day meals)?**
7. **Do you face any difficulties in sending children to school (financial, distance, transport)?**
8. **Is there a school available within your village or nearby area?**
9. **Are you satisfied with the quality of education provided in government schools?**

Data collection using prescribed formats.

Data collection for the Community Service Project titled *"Awareness of Education"* in Kommarigiripatnam habitation was carried out using structured and prescribed survey formats. The main objective of using a formal format was to collect accurate, systematic, and reliable information regarding the socio-economic and educational status of the villagers.

A questionnaire-based survey format was prepared, which included details such as family profile, occupation, income level, educational qualifications, school attendance of children, awareness of government educational schemes, and availability of basic facilities. The format also included questions related to challenges faced by families in continuing education, especially for children and girls.

The data was collected through direct interaction with households in the village. Each family was approached and the questionnaire was filled based on their responses. Care was taken to ensure that the information was recorded clearly and honestly without any bias. The prescribed format helped in maintaining uniformity in data collection from all respondents.

Apart from questionnaires, informal discussions and observations were also used to gather additional information about living conditions, educational awareness, and community needs. This helped in understanding real-life situations more effectively.

After collecting the data, it was systematically organized and analyzed to identify key issues such as school dropouts, lack of awareness about higher education, financial constraints, and limited access to educational resources.

Thus, the use of prescribed formats in data collection made the survey more structured, accurate, and meaningful, which further helped in drawing proper conclusions and suggestions for improving educational awareness in Kommarigiripatnam.

Problems identified and Analyses of the problems

During the socio-economic survey conducted in Kommarigiripatnam habitation as part of the Community Service Project *"Awareness of Education"*, several important problems related to education and living conditions were identified. These problems were analyzed based on field observation, interaction with villagers, and responses collected through the survey.

One of the major problems identified is **low awareness about the importance of higher education**. Many parents are aware of basic schooling but are not fully informed about the benefits of pursuing higher studies. As a result, students often discontinue their education after completing school.

Another significant issue is **financial constraints**. Many families belong to low-income groups and depend on daily wage labour or agriculture. Due to unstable income, they find it difficult to afford educational expenses such as books, transport, uniforms, and college fees.

School dropouts were also observed, especially after secondary education. Some students discontinue studies

to support their families financially or due to lack of motivation and guidance. Early entry into work life is common in some households.

The survey also revealed **limited awareness of government educational schemes** such as scholarships, free education programs, and financial assistance. Many eligible families are not able to benefit from these schemes due to lack of proper information.

Another issue is **distance to higher education institutions**. While primary and secondary schools are available nearby, colleges are located far away, making daily travel difficult for students, especially girls.

In addition, **lack of career guidance and motivation** was identified as a key problem. Students often do not receive proper guidance about future career opportunities, leading to confusion and loss of interest in studies.

Analysis of the problems shows that most issues are interconnected. Financial instability leads to dropout rates, lack of awareness results in underutilization of government schemes, and absence of guidance affects students' motivation. These combined factors slow down the educational development of the village.

Overall, the analysis indicates that improving awareness, providing financial support, and offering proper guidance can significantly reduce these problems and improve the educational status of Kommarigiripatnam habitation.

Short-term and long term action plan

Short term action plan:

In the short term, immediate steps will be taken to create awareness among parents and students about the importance of education. Awareness programs, small group meetings, and door-to-door campaigns will be conducted to motivate families to send their children to school regularly. Information about government schemes such as scholarships, free education, and mid-day meals will be shared clearly with the villagers.

Students who have dropped out will be identified and encouraged to rejoin school. Basic career guidance sessions will also be arranged to help students understand future opportunities. Posters and charts highlighting the value of education will be displayed in common areas like schools and community centers.

Long term action plan:

In the long term, efforts will be focused on improving the overall educational environment of the village. Continuous awareness programs will be conducted to change the mindset of people regarding higher education and girl child education. Steps should be taken to reduce school dropouts by providing proper guidance and motivation at regular intervals. Collaboration with government schemes and NGOs can help in providing financial support to poor students through scholarships and educational aids. Improving transport facilities for students traveling

to nearby colleges is also an important long-term goal.
Skill development and career guidance programs should be introduced to help students build better career opportunities. Establishing a strong link between schools, parents, and the community will ensure better monitoring of students' education. Overall, the short-term actions focus on immediate awareness and motivation, while the long-term plan aims at sustainable improvement in education and socio-economic development of Kommarigiripatnam habitation.

COMMUNITY AWARENESS PROGRAMMES CONDUCTED WITH RESPECT TO THE PROBLEMS AND THEIR OUTCOMES:

As part of the Community Service Project titled *"Awareness of Education"*, several community awareness programmes were conducted in Kommarigiripatnam habitation to address the identified problems such as lack of educational awareness, school dropouts, financial constraints, and limited knowledge of government schemes.
The awareness activities included interactive sessions with villagers, door-to-door campaigns, group discussions, and meetings at common places in the village. During these programmes, the importance of education was explained clearly, highlighting how education helps in improving job opportunities, living standards, and overall development of families. Special focus was given to encouraging girl child education and reducing school dropout rates.

Information regarding government schemes such as scholarships, free education facilities, mid-day meal programs, and other financial support systems was also shared with parents and students. Simple explanations were given to ensure that even less educated parents could understand and make use of these benefits. Students who had discontinued their studies were personally motivated to rejoin school. Career guidance messages were also provided to help students understand future opportunities after completing their education. Posters, charts, and real-life examples were used during the awareness sessions to make the message more effective.

Outcomes of the Programmes:

The awareness programmes resulted in positive changes among the villagers. Many parents showed increased interest in sending their children to school regularly. Some dropout students expressed willingness to continue their education after understanding its importance.

There was also improved awareness about government schemes, and a few families started exploring scholarship opportunities. The attitude of the community towards education, especially girl child education, showed noticeable improvement. Overall, the community awareness programmes successfully created motivation and understanding among the villagers, contributing to the gradual improvement of educational awareness in Kommarigiripatnam habitation.

A MINI-PROJECT WORK IN THE RELATED SUBJECT WITH RESPECT TO THE HABITATION / VILLAGE

As part of the Community Service Project conducted in Kommarigiripatnam habitation, a mini-project work was carried out related to the subject of *Education and Social Awareness*. The main focus of the mini-project was *"Study on Educational Awareness and School Dropout Trends in Rural Areas"*.

The objective of this mini-project was to understand the level of educational awareness among villagers, identify reasons for school dropouts, and analyze factors affecting the continuation of education among children in the habitation. The study was conducted through field visits, personal interviews, and questionnaire-based surveys with parents, students, and local residents.

During the study, it was observed that most children are enrolled in primary education, but a noticeable number of students discontinue their studies after secondary education. The major reasons identified include financial difficulties, lack of awareness about higher education opportunities, migration for work, and insufficient career guidance. It was also found that awareness about government educational schemes exists but is not fully utilized by all eligible families.

The mini-project also included analyzing the importance of education in improving socio-economic conditions. It highlighted how education can help in reducing poverty, increasing employment

opportunities, and improving the overall standard of living in rural communities.

Based on the findings, suggestions were made such as conducting regular awareness programmes, providing career guidance sessions, improving access to scholarships, and encouraging parents to support their children's education, especially for girls.
Thus, this mini-project work helped in understanding real-time educational challenges in Kommarigiripatnam habitation and provided practical insights into improving educational awareness and reducing dropout rates in rural areas.

Recommendations and conclusions:

Based on the Community Service Project conducted in Kommarigiripatnam habitation under the theme *"Awareness of Education"*, the following recommendations and conclusions are made.

Recommendations:

Regular awareness programmes should be conducted to educate parents and students about the importance of education.

Special focus should be given to reducing school dropout rates by continuous monitoring and counseling.

Government educational schemes such as scholarships, free education, and mid-day meals should be widely promoted in the village.

Career guidance sessions should be organized for students at school and village level to help them choose suitable career paths.

Efforts should be made to improve access to higher education institutions through better transport facilities or local support systems.

Girl child education should be strongly encouraged to ensure equal opportunities for all children.

Community involvement should be increased by involving parents, teachers, and local leaders in educational development activities.

Conclusions:

The Community Service Project in Kommarigiripatnam habitation clearly shows that education plays a vital role in the development of individuals and society. The survey and awareness programmes revealed that although basic education facilities are available, there is still a need to improve awareness about higher education and government support schemes.

Financial problems, lack of guidance, and limited awareness are the main reasons for school dropouts. However, after conducting awareness activities, positive changes were observed in the attitude of villagers towards education. Many parents and students showed interest in continuing education.

Overall, it can be concluded that strengthening educational awareness, improving support systems, and continuous motivation can significantly improve the educational status of Kommarigiripatnam habitation and contribute to the overall development of the community.
